shavkatjony.github.io

PROFILE

Data scientist building ML systems to a production standard: tested pipelines, models chosen against baselines, evaluation on data the model never saw, and services people can use. Background in econometrics and business statistics. Open to junior data science and ML roles, in Korea or with international English-speaking teams.

SELECTED PROJECTS

Telco Customer Churn

Classification · retention · 2026 · Complete

- Built it end to end: cleaning and feature engineering, stratified cross-validation of three classifiers, one persisted scikit-learn Pipeline, a Streamlit app, a FastAPI service and a pytest suite in CI.
- Held-out test ROC-AUC 0.842 with recall 0.791: 296 of 374 churners caught. Chosen over a random forest with higher accuracy that missed more than half of them.

Python · pandas · scikit-learn · FastAPI · Streamlit · pytest · GitHub Actions · github.com/shavkatjony/telco-churn-prediction

Olist Marketplace: Delivery & Loyalty

SQL-first analytics · live dashboard · 2026 · Complete

- Loaded 9 raw tables into SQLite, wrote the analysis in SQL (CTEs, window functions, cohorts) and published an interactive d3 dashboard whose numbers are rebuilt from the raw Kaggle files.
- Only 3.12% of customers reorder. Reviews fall from 4.29 stars on time to 1.73 at 8+ days late, and across states the on-time rate tracks reviews (r = 0.78) more closely than delivery days do (r = −0.53).

Retail Commercial Intelligence

Data modelling · BI · 2026 · Working

- Designed a star schema with an explicit grain, staged DuckDB SQL, a data-quality build gate, a metrics engine with a transparent priority score, and a self-contained three-page HTML dashboard.
- At full M5 shape the build processed 59.1M rows end to end in 84 s, with peak memory cut from 8.8 GB to 2.6 GB. The business findings shown are illustrative: the repo runs on a synthetic, M5-shaped sample.

DPEC: Formula 1 Pace Intelligence

Forecasting · uncertainty · applied AI · 2026 · In development

- Built it solo from first download to deployed app: a 545-session pipeline and DuckDB warehouse, a walk-forward forecaster with calibrated 80% ranges, a strategy model, a read-only FastAPI service and web app, and an AI assistant graded by an automatic exam.
- On 37 race weekends held out from every modelling choice, race-pace error after qualifying was 0.548% of a lap (about 0.49 s), against 0.589% for the best of five baselines, and 79.9% of real results fell inside the 80% ranges.

Paper → Data: Korean Invoice Scanner

Computer vision · OCR · 2026 · Working

- Wrote a three-stage classical pipeline: OpenCV page detection and perspective correction, ORB/SIFT matching with RANSAC to register the photo onto a blank template, and per-field Korean OCR with Tesseract into a CSV.
- On a rendered invoice photographed in perspective with shadow and uneven light: 12 of 12 fields read exactly and a 0.3–0.8 px corner error after RANSAC. Not a held-out score: the pipeline was tuned on this same sample.

Python · OpenCV · NumPy · Tesseract (kor/eng) · matplotlib · Repository is private: code available on request.

EXPERIENCE

Data & Business Analyst, KVENTS

Nov 2024 – Dec 2025 · Chust, Namangan, Uzbekistan · remote

- Digitised sales, inventory and expense records into structured datasets in Excel and Google Sheets.
- Business and financial analysis of sales, inventory and costs.
- Time-series forecasts of sales and expenses to plan resources.

EDUCATION

Bachelor of Integrated Business Management (IBM)

Dong-A University, Busan, South Korea · 2026

Focus: Econometrics, business statistics and strategy, marketing research.

SKILLS

Programming	Python (pandas, NumPy), SQL (DuckDB, SQLite)
ML & statistics	scikit-learn pipelines, stratified CV, statsmodels (WLS, OLS, logit), walk-forward backtesting, split-conformal ranges, Monte Carlo simulation
Data engineering	Parquet/PyArrow, DuckDB star schemas, data-quality gates, idempotent ingestion
Serving & practice	FastAPI, Docker, Streamlit, pytest, Ruff, GitHub Actions CI
Computer vision	OpenCV (contours, homography, ORB/SIFT + RANSAC), Tesseract OCR, PyTorch (MNIST)
Applied AI	LLM tool use with the Claude API and Ollama, graded by an automatic exam
Learning	Probability calibration, CNNs, Tableau, R (coursework)
Spoken	Uzbek (native), English (fluent), Turkish (fluent), Korean (beginner)
