PROFILE

Data Scientist building end-to-end data products. I build reproducible pipelines, apply statistical modelling and machine learning, and deliver evaluated results through applications people can use. My work emphasises rigorous validation, reproducibility, and clear reporting of both results and limitations. 3+ years of experience in data analysis and modelling; 20+ projects delivered across analytics, statistical modelling and machine learning. Open to remote, full-time and project-based roles.

SELECTED PROJECTS

DPEC: Formula 1 Pace Intelligence (flagship)

Forecasting · uncertainty · applied AI · 2026 · Complete

- Built it solo, end to end: a 545-session pipeline and 15-table DuckDB warehouse, research on what predicts race pace, one shared weighted regression tested walk-forward with split-conformal 80% ranges, a Monte Carlo strategy model, a read-only FastAPI service and web app on Render, and an AI race engineer graded by an automatic exam.
- On 37 race weekends held out from every modelling choice, race-pace error after qualifying was 0.548% of a lap (about 0.49 s), against 0.589% for the best of five baselines, and 79.9% of real results fell inside the 80% ranges.

Telco Customer Churn

Traditional machine learning · classification · 2026 · Complete

- Built it end to end: cleaning and feature engineering, stratified cross-validation of three classifiers, one persisted scikit-learn Pipeline, a Streamlit app, a FastAPI service and a pytest suite in CI.
- Held-out test ROC-AUC 0.842 with recall 0.791: 296 of 374 churners caught. Chosen over a random forest with higher accuracy that missed more than half of them.

Retail Commercial Intelligence

Data engineering · data modelling · decision support · 2026 · Working

- Designed a star schema with an explicit grain, staged DuckDB SQL, a data-quality build gate, a metrics engine with a transparent priority score, and a self-contained three-page HTML dashboard.
- At full M5 shape the build processed 59.1M rows end to end in 84 s, with peak memory cut from 8.8 GB to 2.6 GB. The business findings shown are illustrative: the repo runs on a synthetic, M5-shaped sample.

Olist Marketplace: Delivery & Loyalty

SQL-first business analysis · live dashboard · 2026 · Complete

- Loaded 9 raw tables into SQLite, wrote the analysis in SQL (CTEs, window functions, cohorts) and published an interactive d3 dashboard whose numbers are rebuilt from the raw Kaggle files.
- Only 3.12% of customers reorder. Reviews fall from 4.29 stars on time to 1.73 at 8+ days late, and across states the on-time rate tracks reviews (r = 0.78) more closely than delivery days do (r = −0.53).

Paper → Data: Korean Invoice Scanner

Computer vision · OCR · 2026 · Working

- Wrote a three-stage classical pipeline: OpenCV page detection and perspective correction, ORB/SIFT matching with RANSAC to register the photo onto a blank template, and per-field Korean OCR with Tesseract into a CSV.
- On a rendered invoice photographed in perspective with shadow and uneven light: 12 of 12 fields read exactly and a 0.3–0.8 px corner error after RANSAC. Not a held-out score: the pipeline was tuned on this same sample.

Python · OpenCV · NumPy · Tesseract (kor/eng) · matplotlib · Code available on request (private repository).

EXPERIENCE

Data & Business Analyst, CHUST KVENTS

Nov 2023 – Mar 2026 · Chust, Namangan, Uzbekistan · remote

- Developed Python and SQL workflows to analyze sales, inventory, product, and customer data across the head office and three retail locations.
- Applied statistical analysis and machine learning for product demand forecasting, customer segmentation, and purchasing behavior analysis.
- Analyzed product profitability, sales trends, and pricing performance to identify business improvement opportunities.
- Automated data processing, reporting, and predictive workflows to support data-driven business decisions.

EDUCATION

Bachelor of Integrated Business Management (IBM)

Dong-A University, Busan, South Korea · 2026

Focus: Statistics, econometrics, business statistics and strategy, marketing and marketing research.

SKILLS

Programming & Data	Python, SQL (MySQL, PostgreSQL), R, pandas, NumPy, JSON, CSV, Parquet
Statistics & Modelling	Probability, Descriptive & inferential statistics, EDA, Hypothesis testing, Weighted least squares, OLS, Regression, Correlation analysis, Bootstrap intervals, SciPy, statsmodels
Machine Learning	scikit-learn, Supervised & unsupervised learning, Regression, Classification, Decision trees, Random forest, Gradient boosting
Model Development & Validation	Data cleaning, Preprocessing, Feature engineering, Stratified cross-validation, Baseline comparison, Model evaluation, Walk-forward backtesting
APIs & Deployment	APIs, REST APIs, FastAPI, Streamlit, Docker, Postman, Git, GitHub
Visualization & Applied AI	Matplotlib, Seaborn, Plotly, D3.js, Tableau, LLM tool use (AI APIs and Ollama)
Spoken	Uzbek (native), English (fluent), Turkish (fluent), Korean (beginner)
